

What if your cot does not have wheels?

**If your cot does not have wheels to remove?
Simply draw two lines as shown in this picture below,
from corner to corner on the underside of each leg of the cot.**

NOTE: Turn the whole cot on the side, to mark and drill all four legs.

**Then drill an 8mm hole into the cot leg,
where the two lines cross. Drill in 25mm deep.**

**These holes are needed
to fit the supplied locating pins
to keep the cot leg secure
and in the centre of the Lullabub unit.**
